---

Dear Hiring Manager,

If you are looking for an Intern with a strong background in finance and economics, then I am a great fit for Alvarez and Marsal. My coursework and previous internships have taught me how to break down complex data into easy-to-comprehend information, work collaboratively with clients, and communicate insights persuasively.

I have had 3 different internship opportunities over a couple of years with 2 different firms. The first one is Park Avenue Capital, where I started as a Financial Representative Assistant in 2024. Here I got to sit in on client meetings but was more or less helping the wealth manager with everyday tasks.

This past summer (2025), I was a Financial Planning Analyst Intern with a lot more responsibilities. I got to present the presentations I made to clients weekly and developed the ability to efficiently consolidate and summarize clients' balance sheets and income statements. I created multiple investment and insurance summaries and got to provide recommendations. Some of my highlights were bringing in a 9-million-dollar client, helping someone purchase a 600,000+ dollar home, and helping clients feel comfortable with their finances.

I had a second internship this past summer (2025) working at Tusk Strategies as a Finance Intern. For some background, Tusk Strategies focuses on highly regulated industries and helps solve their problems. I worked mainly with the Consulting and Venture capital entities, but also interacted and went to meetings for the tax-exempt organizations and their bookstore. I did accounting in the mornings for all entities, then would do finance for the middle of the day, and then would code in SQL to make data more easily consumable. My internship highlights included helping to manage millions of dollars and tracking the current funds. I learned a lot on this job very quickly, and the company put a lot of trust in me, which is something I am looking for in my summer 2026 internship.

I am currently in Advanced Data Science for finance where we code in python at a high level while utilizing AI to analyze trends, patterns and are trying strategies to beat alpha. Also currently in Advanced Econometrics where we are doing research and coding in Stata. I have already taken Investments and Corporate Finance making me highly skilled in finance technicals and modeling in excel. I strongly believe my skill sets align with Alvarez and Marsal. Thank you for taking the time to read this and have a great day.

Sincerely,

*Andrew Clark*
